

The Game Plan — Who We Target & The Gap We Own

THE GAP

New Zealand has platforms for **finding** tradies and software for **managing** maintenance — but nobody can put a tradie at your door when it's urgent. Builderscrack collects quotes you wait on; Tapi coordinates the property manager's paperwork but owns no supply. The moment it's 9pm and the pipe has burst, both are useless — and the industry's own numbers prove it: **roughly half of all rental repair requests are logged after hours**, exactly when nobody is dispatching anyone. **QuickieFix owns that moment: live dispatch of verified, available, nearby tradies.**

WHO WE TARGET — THREE PLAYS, IN ORDER

- 1 SUPPLY FIRST — before any customer ever sees the app.**
15–40 hand-picked tradies in one Auckland area; three urgent trades: **plumbing, electrical, locksmiths**. The recruiting pitch is written by the incumbents' angriest reviews — tradies are publicly furious about paying for leads that go nowhere. Our offer is the opposite: **see the full job with photos before you accept, arrive with the right gear, pay a flat \$15 only on completed jobs — first five free.** And one franchise trade firm signing brings 10–15 verified tradies plus an existing after-hours on-call roster: emergency coverage solved in a single deal.
- 2 URGENT CONSUMER JOBS — the proof engine, not the profit.**
One suburb cluster, not all of Auckland, reached through community pages for near-zero cost. Consumers keep tradies fed and toggled Available between bigger contracts — and they generate the stories that sell everything else: *“a plumber at my door 15 minutes after I asked, and I never made a phone call.”* Density in one place beats presence everywhere: in a dispatch business, response time is the product.
- 3 LANDLORDS & PROPERTY MANAGERS — where the money is.**
We don't compete with their software; we fill its blind spot. The pitch is risk, not convenience: **“When it's urgent and after-hours, one button dispatches a verified tradie — and you get the complete record: photos, messages, timestamps.”** Tenants can already legally arrange urgent repairs and bill the landlord if unreachable — a landlord without pre-arranged urgent dispatch is exposed; we sell the insurance against that. The overlooked segment: **~half of NZ rentals are self-managed private landlords** — PM-grade pain, no PM tools, reachable through the same app.

WHY THE INCUMBENTS CAN'T FOLLOW

Builderscrack's revenue depends on tradies chasing leads — instant dispatch cannibalises their model. Tapi has no supply network and would need to become a marketplace overnight. **Speed isn't a feature we added; it's an architecture they would have to rebuild for.** Every review on QuickieFix comes from a real completed, GPS-timestamped job — a trust asset that compounds and can't be copied retroactively.

THE PLAN IN ONE LINE — Own urgent response in one suburb: supply first, consumers as proof, landlords as revenue. Then expand suburb by suburb.
