1. How QuickieFix works for property people

As a landlord or property manager you get three things ordinary maintenance phone-arounds never give you:

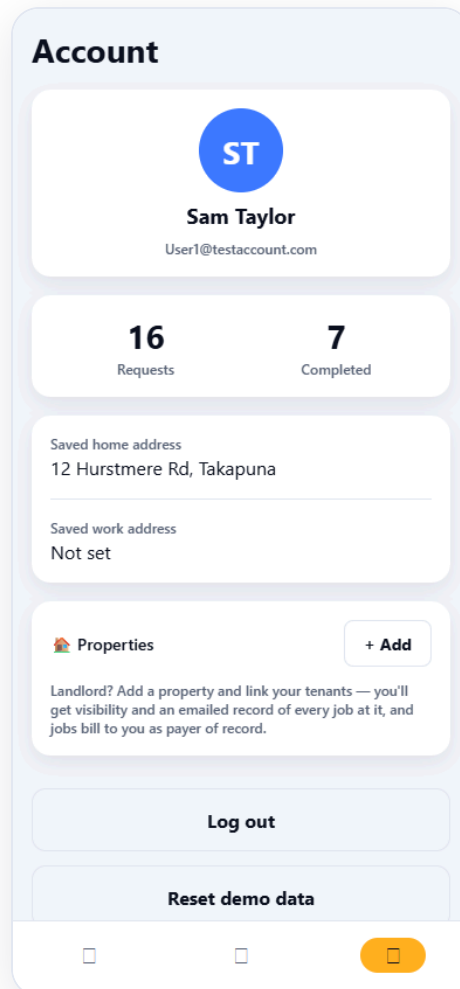

1. **Speed** — verified tradies dispatched to the property in minutes, chosen by proximity and rating, never by who answers the phone.
2. **Visibility** — you're **emailed automatically** when a job is requested at your property and again when it completes, with the full record: what, who, when, how long, and how it was rated.
3. **A clean paper trail** — every completed job carries a server-generated confirmation code (`QF-xxxxxx`) and a rate snapshot, giving you a tamper-proof reference for every invoice.

Tenants can raise issues themselves at properties you link them to — you stay informed without being the middleman at 10 pm.

All customer-side features (requesting, tracking, messaging, ratings) work exactly as described in the **Customer User Manual** — this manual covers what's *additional* for property owners.

2. Getting started

1. Install the app from <https://quickiefix.app/download> (or use the web app).
2. Create a standard account: 🔍 **I need a tradie** → name, email, password. There is no separate "landlord account" — property features live inside every customer account.
3. Open the **Account** tab. Everything property-related happens in the 🏠 **Properties** section.

The Account tab — the 🏠 Properties section is your property hub.

3. Adding your properties

In **Account** → 🏠 **Properties**:

1. Tap + **Add**.

2. **Label (optional)** — how you know it, e.g. "*Unit 4, Takapuna*".
3. **Address** — the full street address.
4. Tap **Add property**.

Repeat for every property in your portfolio. Each property card shows its label, address, and how many tenants are linked.

4. Linking tenants

Linking a tenant does two things: the property appears in **their** app as a one-tap job location, and **you** get automatic visibility of every job they raise there.

1. Ask your tenant to create a free QuickieFix account (they just need the app and an email).
2. On the property card, enter their account email in "**Tenant's QuickieFix email**".
3. Tap **Link tenant**.

The tenant now sees the property in their app marked "*You're a tenant here · managed by {your name}*". Unlink any tenant at any time with the **Unlink** button next to their email.

Tip: link tenants the day the tenancy starts — it takes 30 seconds and every future maintenance issue then documents itself.

5. Requesting work at a property

Request exactly as a normal customer (⚡ **Request help**), with one difference at **Step 3 — Location**:

- A "**For one of your properties?**" picker appears above the address field, listing all your properties.
- Tap the property — the address (and its exact coordinates) fill automatically.

Then choose your matching mode as usual:

- ⚡ **Auto-assign** — nearest available pro, first to accept.
- 👁 **Browse & choose** — compare rates, ratings and distance, pick your own. Ideal for non-urgent maintenance where you want control over who enters your property.

Everything else — photos (add up to 4; highly recommended for maintenance triage), live tracking, messaging, completion codes — works exactly as in the Customer manual.

6. When a tenant requests work

A linked tenant simply opens their own app, taps **Request help**, and picks the property from *their* location step. From that moment:

- The job is **stamped with the property and with you as payer of record**.
 - You are **emailed immediately**: "*New job requested at your property*" — property, service, the tenant's description of the issue, and live status.
 - Dispatch proceeds instantly — no approval bottleneck in the middle of a burst pipe. (You'll always know, because the email arrives the moment the request is made.)
 - When the job completes you receive the **completion email** with the full record.
-
-

7. Your paper trail: automatic property emails

Two branded emails per job, no action required:

 **"New job requested at your property"** — sent the moment a job is raised:

Field	Content
Property	Address (and your label)
Service	Trade requested
Issue	The requester's description
Status	Live status at time of sending

 **"Job complete at your property"** — sent at completion, adding:

Field	Content
Tradie	Business that did the work
Accepted / On site / Completed	Timestamps
Customer rating	The star rating given

Together with the completion record (code + rates), this is a per-property maintenance history you never have to compile by hand.

8. Payer of record and invoicing

- Jobs at your linked properties are stamped with **you as payer of record**.
- QuickieFix processes no payment — **the tradie invoices directly** at the rates snapshotted when they were confirmed.
- At completion, the tradie confirms the **invoice contact name and email** on-site. For tenant-raised jobs, tenants should give **your** billing details here — brief them once, and the invoice comes straight to you along with the `QF-` confirmation code.
- Quote the `QF-XXXXXX` code in any invoice query — it's the shared, tamper-proof record.

9. Monitoring jobs at your properties

In **Account** → **Properties** → "**Jobs at your properties**", you'll see the recent jobs across your portfolio at a glance — trade, address and live status. Tap through any job you raised yourself for full live tracking. Tenant-raised jobs keep you informed via the email trail.

10. The tenant experience

What your tenants see:

- The property appears in their **Account** → **Properties** as "You're a tenant here · managed by {landlord name}".
- When they request help, the property is offered as a one-tap location.
- They get the full customer experience: photos, live tradie tracking, in-app masked messaging, and the completion record.
- They **cannot** add/remove tenants or see your other properties.

A one-line brief for new tenants works well: "Anything broken? Use QuickieFix, pick the flat as the location, and put my email as the invoice contact when the job's done."

11. Managing a portfolio

- **Label consistently** ("12A Ponsonby Rd — front flat") — labels appear on property cards and in tenant apps.
- **One property = one card**, each with its own tenant links.
- Property-management companies with many units can run all properties under one QuickieFix account, or one account per portfolio manager — links and emails follow the account that owns the property.
- **Browse & choose + the message thread** is your vetting tool: ask a tradie about their approach before choosing them for sensitive properties. Note that pre-assignment messages are cleared when the job closes (see below), so record anything contractual in the invoice conversation instead.

12. Privacy and data retention

Data	Policy
Property emails	Yours to keep — they're the durable record
Completion codes / job records	Permanent
In-app messages	Deleted automatically when the job closes
Job photos	Deleted automatically 24 hours after the job ends — save any photos you need for records when the completion email arrives

Data	Policy
Exact address	Revealed to a tradie only once the job is theirs; candidates see suburb-only
Tenant contact details	Masked in all in-app messages

13. Troubleshooting & FAQ

My tenant can't see the property. The link is by their **QuickieFix account email** — confirm they registered with the exact email you linked, and that they're signed in. Re-link with the correct address if needed.

Can a tenant approve/see my other properties? No. Tenants see only properties they're linked to, and only as a job location.

Do tenant jobs need my approval before dispatch? No — dispatch is immediate (a burst pipe can't wait for email tennis). You're notified the moment the request is made.

Who pays the tradie? Whoever's details are confirmed as the invoice contact at completion. Brief tenants to enter your billing email; the job is stamped with you as payer of record either way.

Can I get the emails to a different address? Property emails go to your account email. Use your property-management inbox as your account email if you want the trail landing there.

A job went badly — what's my recourse? Open the job → **Report a problem**. Complaints go straight to the QuickieFix operations team and are tracked to resolution. Have the **QF-** code handy.
