1. How the company model works

QuickieFix uses a **tag model**: the individual tradie is always the unit that gets dispatched, and your company is the **tag** that binds their jobs to your business for branding, rates, reporting and billing.

What that means in practice:

- Your tradies each run the normal QuickieFix app — going available, receiving jobs by proximity/rating, completing on-site.
- Every job a **tagged** tradie accepts is stamped with your company name and **your company rate card** — customers see your business and your prices.
- Their completed jobs, hours and ratings roll up into **your portal dashboard**.
- You control the roster: only you (or QuickieFix) can remove a tradie from your team.

The lifecycle of a seat: **issued** → **claimed** → **validated** → **(removed)**. You issue a tag code; the tradie claims it in the app; QuickieFix validates the identity match; from then on they're on your roster.

2. Creating your company

1. Open the **Business Portal**: <https://quickiefix-portal.web.app>

The Business Portal — create your company here.

2. Click **"Create your company"**.
3. Enter: **Company name, Your name, Email, Password** (min 6 characters).
4. Click **Create company**.

You land on your Dashboard. Your company status is **"Setup"** until you save a rate card (next section) — do that first.

Sign back in any time at the same URL with **Sign in**.

3. Going live: your rate card

Settings → Rate card.

Field	Required	Example
Hourly rate (NZD)		95.00
Callout fee	optional	80.00
After-hours callout	optional	140.00

Click **Save & go live**. Your status badge flips from **Setup** (amber) to **Active** (green): *"Rate card saved — you are live."*

Why this matters: the company rate card **overrides every tagged tradie's personal rates**. When any of your tradies accepts a job, the customer sees *your* company name and *your* rates, and those rates are snapshotted into the job as the agreed invoice baseline. One price list, no rogue quoting.

4. Adding tradies one at a time — seats & tag codes

My Tradies → Add a seat.

1. Enter the tradie's **Name**, **Email**, and optionally **Phone** — these must match the details they use in the app, because QuickieFix validates the match.
2. Click **Add seat**.
3. A tag code is generated — e.g. `QF-7K2P9M` — with a **Copy code** button. **Send this code to the tradie. It expires in 14 days** and is single-use.

What happens next:

Stage	Status badge	Meaning
You issue the code	 issued	Waiting for the tradie
Tradie enters it in the app (Profile → Company → Claim seat)	 claimed	Waiting for QuickieFix validation
QuickieFix confirms the name/email/phone match	 validated	On your roster — jobs now carry your brand & rates
You remove them	 removed	Seat revoked

The **Tags** table on the same page shows every code you've ever issued, its status, and actions (**Copy code** for unclaimed ones, **Remove** for active ones).

The tradie needs their own QuickieFix account first (registered in the app with their trade and licence, and admin-approved). The seat code links that account to your company — it doesn't create the account. To create accounts *for* them, use CSV import below.

5. Adding your whole team at once — CSV import

My Tradies → Import from a spreadsheet — the fastest way to onboard an existing team:

- Click **Download template**. Columns: `firstName, lastName, email, businessName, primaryTrade, secondaryTrades, yearsExperience, licenceNumber`
 - `primaryTrade` must be one of: electrician, plumber, gasfitter, builder, roofer, painter, locksmith, handyman, appliance_repair, landscaper, cleaner, pest_control
 - `secondaryTrades` is semicolon-separated, e.g. `gasfitter;handyman`
 - Example row: `Mike,Jones,mike@example.com,Lazer Plumbing,plumber,gasfitter;handyman,8,PGDB-12345`
- Fill it in and click **Choose CSV file**.
- Review the **preview**: rows are marked **ready** (green) or flagged with issues (red — missing name, invalid email, unknown trade). Fix and re-upload if needed.
- Click **Import X tradie(s)**.

For each imported tradie, QuickieFix automatically:

- creates their account (with a temporary password),
- issues a **pre-validated tag** (no code-claiming step needed — they're on your roster immediately),
- sends them a branded **welcome email**: "*You've been added to {Your Company} on QuickieFix*" with their credentials and the app download button.

Your tradies just tap the email's download link, log in, and go available.

6. What your tradies experience

Point your team at the **Tradie User Manual** for day-to-day use. The company-specific differences they'll notice:

- **Profile → Company** shows your business with a ✓ **Verified** badge and the note "*Your jobs and rates are managed by this business.*"
- **Their rate card is locked** (Rate card  — *Rates are managed by {Company}*). Their personal rates are kept on file and resume automatically if they ever leave.
- Customers see **your company name** on their accepted jobs.
- Free-job credits: **your shared company pool is consumed before their personal credits.**
- Only you can remove them from the roster — they can't be poached off your seat by accident.

Everything else — availability, wave dispatch, browse & choose, live ETA, completion codes, timesheets — is the standard tradie experience.

7. Your dashboard: team performance

Dashboard gives you the trading picture at a glance:

KPI cards: Tradies · Completed jobs · Avg rating · Time on site (aggregate)

Team performance table — one row per tradie:

Column	Shows
Tradie	Name + business name
Trade	Primary trade
Jobs	Completed count
Rating	★ average
Time on site	Total billable-style hours
Status	Approval badge

Click any row for the tradie's detail page: KPIs, complete **job history** (customer, address, completion date, on-site duration, rating per job) and their **customer reviews** verbatim — your quality-control view.

8. Managing the roster: tags, removal, leavers

- **Roster** = every tradie with a **validated** tag, listed under "*Tradies in {Company}*".
 - **Removing someone**: My Tradies → Tags table → **Remove** → confirm. Their tag becomes *removed*; from that moment new jobs no longer carry your brand or rates (their personal rate card resumes).
 - **History is preserved**: jobs completed while tagged remain stamped with your company forever — removal never rewrites the past. Their historical performance stays visible in your reporting.
 - **Expired codes**: unclaimed codes die after 14 days — just issue a fresh seat.
-

9. Money: rates, fees, shared credits, billing

Concept	How it works
Customer invoicing	Your tradies' jobs carry your rate card . The customer is invoiced by your business directly — QuickieFix processes no payment. Every completed job generates a <code>QF-XXXXXX</code> confirmation code emailed to the customer with the rate snapshot; put it on your invoice as the shared reference.
Platform fee	A small flat fee per completed job (\$15) — charged per tradie, invoiced monthly on the 1st, off-app, 7-day terms.
Shared credits	Your company can hold a shared pool of free-job credits — consumed before any tradie's personal credits, so early jobs cost nothing. Ask QuickieFix to load your pool.
Non-payment	Sustained non-payment leads to a dispatch hold on the affected tradies until settled.

10. Company settings

Settings page:

- **Rate card** — update any time; new rates apply to *future* acceptances (in-flight jobs keep the rate snapshotted at their confirmation).
 - **Company profile** — company name and **billing email** (where your platform invoices go, e.g. `accounts@yourcompany.co.nz`).
 - **Account** — your admin email and Company ID (quote it in support requests).
 - **Log out**.
-

11. Rules to know

- **No rate card = not live**. Set the hourly rate first; everything else follows.
- **Tag codes are single-use and expire in 14 days**.

- **Name/email must match** between the seat you issue and the tradie's app account — that's what validation checks.
 - **Company rates override personal rates** for tagged tradies; the override ends when the tag is removed.
 - **Job history is immutable** — completed jobs stay stamped with the company that held the tag at acceptance.
 - **Shared credits before personal credits.**
-
-

12. Troubleshooting & FAQ

My tradie claimed the code but still isn't on the roster. Claimed seats need a one-time QuickieFix validation (identity match). It shows as *Pending verification* in their app and  *claimed* in your Tags table until then. If it's stuck, check the name/email you issued matches their account exactly.

The code expired before they used it. Issue a new seat — codes are throwaway.

A tradie left the company. Tags table → **Remove**. Past jobs stay yours; future jobs are theirs alone.

Can a tradie be on two companies? No — one active tag per tradie.

Can I set different rates per tradie? Not within one company — the company rate card is uniform (that's the point). Genuinely different pricing tiers would be separate companies.

Where do I see what we owe QuickieFix? Each tradie's dashboard shows their month ("🇺🇸 This month"); the consolidated invoice arrives monthly at your billing email. Fees are flat per completed job, credits are burned first.

My import flagged rows as "Unknown trade". The `primaryTrade` column must use the exact keys listed in section 5 (lowercase, underscores — e.g. `appliance_repair`).
