8. People: Tradies, Companies, Customers 9. Platform: Billing, Metrics, Waitlist

Part D — Reference

10. Status and badge reference 11. Troubleshooting & FAQ

Part A — Getting in

1. Signing in and who sees what

Open **<https://quickiefix-portal.web.app>** in any modern browser.

The portal serves two audiences from the same login page — your email decides where you land:

You are	You see
Company admin (any registered business)	The company portal: Dashboard · My Tradies · Settings
Platform admin (email on the QuickieFix admin allowlist, e.g. <code>admin@quickiefix.store</code>)	The full back office

New company? Click **"Create your company"**: Company name → Your name → Email → Password (min 6 characters) → **Create company**.

Returning? Sign in with email and password.

The Business Portal sign-in page.

Part B — Company admin portal

*(For the complete business playbook — onboarding strategy, money model, tradie experience — see the **Company User Manual**. This part is the screen-by-screen portal reference.)*

2. Dashboard

Your team at a glance.

KPI cards:

- **Tradies** — validated roster size
- **Completed jobs** — team total
- **Avg rating** — team average (0.0–5.0)
- **Time on site** — aggregate on-site hours

Team performance table: one row per tradie — name, trade, jobs, ★ rating, time on site, approval status.
Click a row to open their detail page.

Empty state ("No tradies yet") links straight to **Add tradies**.

The Dashboard — KPI cards and the team performance panel.

3. My Tradies

Your roster and onboarding hub. Four sections:

3.1 Tradies in {Company} — the roster

Every **validated** tradie: name, trade, email.

3.2 Add a seat

Issue a single tag:

1. **Name** + **Email** (required — must match the tradie's app account), **Phone** (optional).
2. **Add seat** → a code like `QF-7K2P9M` appears with **Copy code**.

3. "Send this code to the tradie. It expires in 14 days."

The tradie claims it in their app (**Profile** → **Company** → **Claim seat**); a platform admin then validates it.

My Tradies

Tradies in North Shore Trades (0)

No validated tradies yet

Add a seat below and send the code to your tradie.

Add a seat

Issue a tag for a tradie. They enter the code in the app to claim their seat; a platform admin then validates it.

Name: Mike Jones

Email: mike@lazer.co.nz

Phone (optional): 021 234 5678

Add seat

Import from a spreadsheet

Download template

Download the template, fill in your tradies, then upload it. Each tradie gets an account linked to North Shore Trades (with a pre-validated tag) and an email to set their password. Valid trades: electrician, plumber, gasfitter, builder, roofer, painter, locksmith, handyman, appliance_repair, landscaper, cleaner, pest_control.

Choose CSV file

Tags (0)

My Tradies — the roster, Add a seat, and spreadsheet import.

3.3 Import from a spreadsheet

Bulk onboarding:

1. **Download template** — columns: `firstName`, `lastName`, `email`, `businessName`, `primaryTrade`, `secondaryTrades`, `yearsExperience`, `licenceNumber`.
2. **Choose CSV file** → preview shows "{X} ready · {Y} with issues" with per-row error chips (Missing name / Invalid email / Unknown trade).
3. **Import X tradie(s)** → progress ("Creating accounts & sending emails...") → results list per email.

Imported tradies get an account, a **pre-validated tag** (no claiming step) and a **welcome email** with a temporary password and the app download button.

3.4 Tags — full history

Every code ever issued: **Code** · **Issued to** · **Status** · **Actions**.

-  **issued** → **Copy code** available
-  **claimed** → awaiting platform validation
-  **validated** → on the roster
-  **removed** → shows the removal reason

Remove (with confirmation) revokes a seat at any stage.

4. Tradie detail page

Click any roster row. Shows:

- Header: name, business name, trade, years, approval badge
- KPIs: **Completed jobs** · ★ **rating** ({n} reviews) · **Total time on site** · **Total job time**
- **Job history table**: customer, address, completed date, on-site duration, per-job rating
- **Customer reviews**: stars, date, review text and tags, verbatim

Use it for quality control, dispute context and performance reviews.

5. Settings

- **Rate card** — hourly rate (required), callout fee, after-hours callout. First save shows "**Save & go live**": your company flips from **Setup** to **Active** and your rates apply to every tagged tradie's future jobs.
- **Company profile** — company name, **billing email**.
- **Account** — admin email + Company ID (quote in support requests).
- **Log out**.

Settings — rate card, company profile and account.

Part C — Platform back office

Access requires an allowlisted platform-admin email. This is mission control for the whole marketplace.

6. Back-office overview

Sidebar navigation:

Group	Tabs
Operations	Overview · Jobs · Tag queue · Complaints
People	Tradies · Companies · Customers
Platform	Billing · Metrics · Waitlist

The admin card at the bottom shows your identity and **Log out**.

7. Operations: Overview, Jobs, Tag queue, Complaints

Overview

- **KPIs** (all clickable): Total jobs · Completed · **Active now** (live dot) · Tradies
- **Needs attention** — three cards that turn red when non-zero: **Pending approvals**, **Tag queue**, **Open complaints**. This is your daily to-do list.
- **Recent jobs** — last 10 with status chips.

Jobs

Full job browser. Filters: **All** · **Completed** · **Searching** · **Cancelled**. Columns: Trade · Customer · Tradie · Created · On-site duration · Status chip.

Tag queue

The company-seat validation desk. For each **claimed** tag: code, company, who it was issued to, and which tradie claimed it.

Workflow: verify the issued name/email matches the claiming tradie → click **Validate**. The tradie is bound to the company (their jobs now carry company branding and rates). Empty state: "  *Nothing to validate.*"

Complaints

One card per complaint: subject, status badge, date, full detail, and the parties (*Trade · Customer → Tradie*). Click **Mark resolved** when handled. Empty state: "  *No complaints.*"

8. People: Tradies, Companies, Customers

Tradies

The master roster with filters **All** · **Pending** · **Approved**. Per row: tradie, trade, company, rating, **credits (inline-editable)**, status — and the action buttons:

Button	Effect
Approve	Verifies a pending tradie — they can now receive jobs. Check licence details first; regulated trades must carry a licence number.
Hold / Reinstate	Pauses/resumes dispatch for non-payment. The tradie sees "  Dispatch paused" in their app. Use after billing terms are exhausted.
Suspend / Reject	Removes an approved tradie from dispatch (conduct), or declines an application.
Credits → Save	Adjust their free-job credit balance inline.

Companies

Every registered business: name, admin/billing email, **Setup/Active** status, rate card, and **shared credits (inline-editable)** — load a company's free-job pool here.

Customers

Directory: name, email, jobs requested, joined date.

9. Platform: Billing, Metrics, Waitlist

Billing

The monthly invoicing run sheet. Pick a month (YYYY-MM tabs) → see "**{X} payers · \${total} total**" and per-payer rows: **Payer · Billable jobs · Free (waived) · Total**.

"Invoicing happens off-app. This is the run sheet: raise one invoice per payer from these totals (7-day terms), then use the Hold button on the Tradies tab for sustained non-payment."

↓ **Export CSV** produces the invoice-ready file. Fee lifecycle: `waived_credit` → `pending` → `invoiced` → `paid` .

Metrics

The four pilot performance gates, computed from live job data:

Gate	Target
Median time-to-accept	< 5 min
Median time-to-arrival	< 45 min
Jobs per tradie / week	≥ 1.5
No-tradie-found rate (emergency)	< 10%

Each shows PASS (green) / watch (amber) / no data. The pilot must sustain these for 4+ weeks.

Waitlist

Landing-page signups: email, customer/tradie role badge, joined date, source — with **↓ Export CSV** for launch campaigns.

Part D — Reference

10. Status and badge reference

Tradie approval:  pending →  approved ·  rejected ·  suspended (+ red **on hold** badge when dispatch is paused)

Tag/seat:  issued →  claimed →  validated →  removed

Company:  Setup (no rate card) →  Active

Job status chips: searching (grey) → confirmed (blue) → travelling / on_site (amber) → completed (green) · cancelled (red) · no_tradie_found (red outline)

Fee status: waived_credit · pending · invoiced · paid

11. Troubleshooting & FAQ

I created a company but tradies' jobs don't show our brand. Three gates: (1) your **rate card is saved** (status Active), (2) the tradie's tag is **validated** (not just claimed — check the Tag queue), (3) the job was accepted *after* validation. Historical jobs never re-stamp.

A tag has sat in "claimed" for days. Only a platform admin can validate. Platform admins: Tag queue → verify identity match → **Validate**. If the claiming account's details don't match the issued seat, remove the tag and issue a fresh one with correct details.

A tradie says they get no jobs. Back office → Tradies: confirm **approved**, not **on hold**, and credits/radius sane. Then check the app side: are they toggled Available?

Numbers on Dashboard look behind. Portal data is live from the same database as the apps; a hard refresh (Ctrl+F5) rebuilds the view after profile changes.

Who can access the back office? Only emails on the QuickieFix platform-admin allowlist. Adding an admin is a configuration change made by the QuickieFix engineering owner — email accounts alone can never elevate themselves.

Can I run the portal on my phone? It's built for desktop browsers; it works on tablets. Day-to-day tradie work belongs in the app, not the portal.
