1. What QuickieFix does for your agency

QuickieFix turns your maintenance desk into an automated pipeline. Instead of fielding calls, ringing around tradies and chasing paperwork, your agency gets:

You get	How
Tenant self-reporting	Tenants report faults from their own phone, at their linked property, photos included — no call to your office needed.
Panel-only dispatch	Jobs at your managed properties go only to your approved panel of tradies and trade companies. Nobody you haven't vetted ever gets dispatched to your properties.
Your commercial terms	Panel jobs run under your agency's commercial agreement. Rates are hidden in-app for those jobs — tradies see the work, not a price negotiation.
Live tracking	Every job has a live status (searching → confirmed → travelling → on site → completed) visible to you on the portal and to the tenant in their app.
Owner-ready records	Every job produces a documented record — trade, issue, tradie, dates, time on site, tenant rating, parts used — exportable per property for your monthly owner statements.

You run all of this from one place: **<https://portal.quickiefix.app>**.

💡 **Founding pilot:** QuickieFix is free for founding pilot agencies. There is no portal subscription fee during the pilot.

2. Getting started

2.1 Create your agency account

1. Go to **<https://portal.quickiefix.app>**.
2. Click **Create one** under the sign-in form.
3. Select  **Property agency** (not Trade company).
4. Enter your **agency name**, **your name**, **email** and a **password** (at least 6 characters).
5. Click **Create agency**.

The Business Portal login — choose  Property agency when creating your account.

2.2 Your agent code — QF-AG-XXXX

Your agency is issued a unique **agent code** in the format `QF-AG-XXXX` the moment the account is created. This code is the key that links everything to your agency:

- **Tenants** enter it in their app (**Account** →  **Property manager**) to connect to you.
- **Individual tradies** enter it in their app (**Profile** →  **Property agents**) to request a place on your panel.
- **Trade companies** enter it in their portal (**Settings** → **Property agents**) to put their team on your panel.

Every invite email you send from the portal carries this code automatically. You can view and copy it at any time on the **Settings** tab.

 Anyone who enters your code only **requests** a link — nothing happens until **you** approve or confirm them in the portal. The code is safe to share widely.

2.3 The dashboard setup checklist

On first sign-in, the dashboard shows a **"Get your portfolio live"** checklist with a progress bar:

1. **Create your agency account** — done.
2. **Add your first property** — your portfolio decides which jobs route to your panel.
3. **Build your tradie panel** — invite the tradies and companies you trust; only they get your jobs.
4. **Invite your tenants** — they report repairs themselves; you keep the paper trail.

Each step has a button that jumps you straight to the right tab. Once all steps are ticked (or the first real job flows), the checklist retires and the working dashboard takes over: KPI tiles (**Properties • Tenants linked • Panel members • Jobs active/done**) and a live table of the most recent jobs at your properties.

The dashboard — setup checklist, portfolio KPIs and a live feed of jobs at your properties.

💡 You are also **emailed on every job** raised at a managed property — you never have to sit watching the portal.

3. Your portfolio — the Properties page

Everything on QuickieFix hangs off a property: jobs are always raised **against a property**, and a property decides which tenants can report there and which panel receives the work.

Properties & tenants — add properties one at a time, import in bulk, and manage tenant links per property.

3.1 Add a property

In **Properties** → **Add a property**:

1. **Label (optional)** — how your office knows it, e.g. "Unit 4, Takapuna". Used everywhere the property is shown; the street address stays underneath.
2. **Address** — start typing and pick from the **NZ address autocomplete**. Selecting a suggestion **pins exact coordinates** to the property — you'll see "✓ Location pinned — tradies get exact distances". This is what makes dispatch distances accurate, so always pick from the list rather than free-typing.
3. **Tenant name and tenant email (both optional)** — fill these in and one click does two things at once: it adds the property **and** emails the tenant an invite containing the app download link, **your agent code** and their property address. The button label changes to **Add property & invite tenant** when an email is entered.

When the tenant installs the app, creates a **customer** account with that email and enters your code, you confirm them in the portal and they are **auto-linked to this exact property** — repairs are then one tap away for them.

3.2 Bulk import your portfolio

For an existing rent roll, use **Import your portfolio**:

1. Click **Download template** — a CSV with the header `label,address,tenantName,tenantEmail` .
2. Fill it in: **one row per property**. `label` , `tenantName` and `tenantEmail` are optional; `address` is required.
3. Click **Choose CSV file** and select your file. The portal validates every row and shows what's ready and what has issues (missing address, invalid tenant email) before anything is imported.
4. Click **Import N properties**. A progress counter runs as each row lands.

Every row with a tenant email triggers the same invite email (app link + your code + their address), and each tenant **auto-links to their own property** when they confirm.

💡 Rows with issues are skipped, not imported — fix them in the CSV and re-import just those rows.

3.3 Tenants: invite, link, unlink

Each property card on the portfolio list has its own tenant tools:

-  **Invite tenant** — type an email into the property's tenant box and send an invite tied to that property. The email shows as **invited** (amber chip) on the card until they confirm.
- **Link existing account** — if the tenant already has a QuickieFix customer account, type their email and click **Link existing account**. Tenants who have already confirmed your agency code appear as **suggestions** in the box, so you can pick them without retyping.
- **Unlink** — removes a tenant from the property. Their past jobs are unaffected.
- **Remove** (top-right of the card) — removes the property from your portfolio. Any linked tenants lose the property in their app; **past jobs and their records are unaffected**.

Tenant confirmations. When an invited tenant enters your code in their app, they appear at the top of the Properties tab under **Tenants waiting for confirmation**. Clicking **Confirm** approves them **and** auto-attaches them to the property they were invited to (matched by email).

⚠️ **The amber warning card.** If a tenant confirmed your code but their email didn't match any property invite, they show in an amber **"Confirmed tenants without a property"** card. These tenants **cannot see their rental or raise repairs** until you link them: find their property in the list and type their email into its tenant box (they'll appear in the suggestions), then click **Link existing account**.

4. Your tradie panel

Your panel is the closed list of tradies and trade companies allowed to receive jobs at your managed properties. Nothing dispatches off-panel at a managed property when the agency is paying.

Tradie panel & invites — send invites, action pending requests, and manage the approved list.

4.1 Invite tradies and trade companies

In **Tradie panel** → **Invite a tradie or trade company**, enter their email and click **Send invite**. The invite carries the app/portal link, **your agent code** and role-specific step-by-step instructions:

- **Sole tradie** — downloads the app, signs up as a tradie, then enters your code under **Profile** → **Property agents**.
- **Trade company** — signs in at the Business Portal and enters your code under **Settings** → **Property agents**, choosing whether the membership covers their **whole team** or **employees only**.

💡 Tenant invites do **not** live here — they're on the Properties tab, because a tenant invite is always tied to a specific property.

4.2 Approve or decline requests

Every membership request — tradie or company — waits in **Waiting for your approval** until **you** act on it. Click **Approve** or **Decline**; a confirmation dialog spells out exactly what approval means before you commit.

The approval dialog — for a company it states whether the membership covers their whole team or employees only, and that jobs dispatch on your agency's commercial terms.

4.3 Individual tradie vs trade company membership

Individual tradie	Trade company	
Who serves you	That one tradie, as their own business	The company's team — their choice of the whole roster or employees only (contractors excluded)
Who chose the scope	n/a	The company admin, when they entered your code
Billing chain	Agency → tradie	Agency → company → tradie

A company membership means any covered, available team member with the right trade can be dispatched to your properties — the company handles its own people, and the commercial relationship runs agency → company → tradie.

4.4 Remove a panel member

Click **Remove** next to any approved member. They **stop receiving jobs at your properties immediately**. Jobs already in progress are unaffected.

The approved panel — each member shows their type (individual tradie or trade company, with scope) and can be removed at any time.

5. How tenant repairs work

Once a tenant is confirmed and linked, their property appears in the QuickieFix app as a one-tap job location. When they report a fault there — trade, description, photos — the app recognises it as an **agency-managed property** and asks one extra question: **who's paying for this job?**

Step 4 of 4 · Review

Ready to go — how do you want to match?

Who's paying for this job?

Harbour Property Management pays
Goes to their approved tradies — costs covered by their agreement.

I'll pay myself
Choose from all available tradies — rates shown upfront, you pay the tradie directly.

30 Davey Crescent
Managed by Harbour Property Management — only their approved tradies get this request. Rates are covered by the agency's agreement.

Billing contact (set by the property manager)
Harbour Property Management
demo-property@quickiefix.store · can't be changed
 1 approved tradie available now · nearest ~2 min away

How do you want to match?

Auto-assign
We alert nearby pros and the first to accept takes it. Fastest.

Find me a tradie · ~2 min

The tenant's phone — at a managed property, the tenant chooses who pays before dispatch.

Option	What happens
"{Your agency} pays" (default)	The job goes only to your approved panel . Rates are covered by your agency's agreement and are not shown or negotiated in-app. The billing contact is locked to your agency (name and email shown read-only, marked can't be changed) — the completion record and any invoicing land with you, not the tenant. The job appears on your Jobs tab, and you're emailed.
"I'll pay myself"	The tenant hires on the open market at their own cost : all available tradies, rates shown upfront, tenant pays the tradie directly.

The tenant tracks the job live in their app throughout — matched tradie, travelling, on site, complete — without ever calling your office.

The agency-pays option is pre-selected. Tenants have to actively opt out to pay themselves, so maintenance flows to your panel by default.

6. Desk dispatch — Request help

Some tenants will still ring the office. The **Request help** tab lets you raise the job for them while they're on the phone — same panel-only dispatch, same tenant tracking.

The screenshot shows the QuickieFix web interface. On the left is a dark sidebar with navigation links: Dashboard, Request help (highlighted with a checkmark), Jobs, Trade panel, Properties, Owner reports, Support, and Settings. At the bottom of the sidebar, it says 'Harbour Property Mana...' with the email 'demo-property@quickiefix...' and a 'Log out' button. The main content area is titled 'Request help at a property' with a date 'Wed, 15 Jul 2026' in the top right. Below the title is a form with the heading 'Request help at a property' and a sub-header 'Tenant on the phone with a fault? Raise it here — the job goes straight to your approved trades, and the tenant sees live tracking in their app.' The form contains four fields: 'Property' (a dropdown menu with 'Select a property...' as the placeholder), 'Tenant (customer of record)' (a dropdown menu with a minus sign as the placeholder), 'What kind of trade?' (a dropdown menu with 'Select a trade...' as the placeholder), and 'Describe the fault' (a text input field with 'Hot water cylinder leaking in the garage...' as the text). Below these fields is an orange button labeled 'Dispatch best match'. At the bottom of the form, a note states: 'Dispatching as Harbour Property Management: rates are covered by your agency agreement, and the job lands on your Jobs tab and owner reports automatically.'

Request help — pick the property, and the linked tenant auto-fills as the customer of record.

1. **Pick the property.** The linked tenant **auto-fills as the customer of record** (if the property has several tenants, pick the caller; if none are linked yet, the job is raised as the agency).
2. **Pick the trade** — plumber, electrician, and so on.
3. **Describe the fault** — a sentence is enough, e.g. "*Hot water cylinder leaking in the garage*".
4. **Check "Available now on your panel."** A live list appears of every approved panel tradie of that trade who is online right now, with their business name, star rating and **distance from the property** (this is why pinned addresses matter).
5. **Dispatch.** Leave ⚡ **Best match** selected to ping the nearest available first with automatic escalation, or select a specific tradie and click **Dispatch this tradie**.

A filled-in request — live panel availability with ratings and distances, best match or a hand-picked tradie.

The moment you dispatch:

- The tenant **tracks the job live in their own app** — you can tell them so while they're still on the phone.
- The job lands on your **Jobs tab automatically** (the portal switches you there) and flows into owner reports.
- Rates are covered by your agency agreement — no pricing conversation happens.

💡 If none of your panel tradies of that trade are online, you can **still dispatch** — they are pinged the moment they come back online.

7. The Jobs board

The **Jobs** tab is the single view of every job at your managed properties — tenant-reported and desk-dispatched alike.

Jobs at your propertiesWed, 15 Jul 2026

All jobs (3)

All properties
All
Live
Completed

PROPERTY	TRADE	ISSUE	TRADIE	RAISED	ON SITE	STATUS
30 Davey Crescent, Orewa 0931, New Zealand	Plumber	TEST JOB — kitchen mixer...	—	14 Jul 2026	—	no tradie found
30 Davey Crescent, Orewa 0931, New Zealand	Plumber	tet tetstetsts	RQC Plumbing	14 Jul 2026	0m	completed
30 Davey Crescent, Orewa 0931, New Zealand	Plumber	test test test	RQC Plumbing	14 Jul 2026	—	cancelled

All jobs at your properties — filter by property and by live/completed status.

Filters:

- **Property dropdown** — narrow to a single property.
- **All / Live / Completed** — *Live* means searching, confirmed, travelling or on site.

Columns: Property · Trade · Issue · Tradie · Raised · On site (time from arrival to completion) · Status.

Statuses update live, no refresh needed:

Status	Meaning
searching	Pinging your panel for a match
confirmed	A tradie has accepted
travelling	Tradie en route to the property
on site	Tradie at the property, working
completed	Done — the record (and confirmation code) is generated
cancelled	Job was cancelled

Status	Meaning
no tradie found	No panel member picked it up — see FAQ

8. Owner reports

The **Owner reports** tab is your deliverable to property owners: everything that happened at their asset, ready to attach to the monthly statement.

Owner reports — per-property job history export and the portfolio summary.

8.1 Per-property maintenance report (CSV export)

Click ↓ **Export owner report (CSV)** to download the full job history with one row per job:

Column	Contents
Property	Street address

Column	Contents
Trade	e.g. Plumber
Issue	The fault description
Tradie	Who did the work
Raised / Completed	Dates
On site (min)	Minutes from arrival to completion
Rating	The tenant's star rating
Parts	Parts & materials recorded at completion (description × qty)
Parts total (\$)	The summed parts cost

The file is named `{your-agency}-owner-report-{date}.csv` — filter it by property in your spreadsheet tool and **attach it straight to the monthly owner statement**.

8.2 Portfolio summary

Below the export, a live summary table shows one row per property: **Jobs · Completed · Avg response** (time from raised to a tradie confirming) · **Avg rating · Last job**. Use it to spot slow-response properties or ones generating unusual volume at a glance.

💡 Every completed job also generates a server-issued confirmation code (`QF-XXXXXX`) on its completion email — a tamper-proof reference if an owner or tradie ever queries an invoice.

9. Support & Settings

9.1 Support

The **Support** tab sends a ticket straight to the QuickieFix team — it's emailed to our ops desk immediately, and we reply to your agency admin email.

10. FAQ

A tenant confirmed my code but says they can't see their property in the app. Their invite email didn't match a property, so they confirmed without auto-linking. They'll be in the amber **"Confirmed tenants without a property"** card on the **Properties** tab. Find their property, type their email into its tenant box (they appear in the suggestions) and click **Link existing account**. The property appears in their app immediately and they can raise repairs.

What do tradies see on jobs at my properties? The work, the address, the fault description and photos — but **no rates**. Jobs at your managed properties run under your agency's commercial agreement, so there is no in-app price display or negotiation for those jobs.

What happens if no panel tradie is available? The job still dispatches and sits at `searching` — every matching panel member is pinged the moment they come online. The job **never leaves your panel**: QuickieFix will not send an off-panel tradie to a managed property on an agency-paid job. If nobody picks it up, it shows as `no tradie found` on your Jobs board — re-raise it later, dispatch a specific tradie from **Request help**, or widen your panel with more invites.

Can a tenant bypass my panel? Only by choosing **"I'll pay myself"** at the who-pays step — that's an open-market job at their own cost, with the tenant as the billing contact. Any job billed to your agency is panel-only, always.

Does removing a property or panel member destroy history? No. Past jobs keep their own stamped copies of the property and agency details — your Jobs board and owner reports are unaffected. Removing a panel member only stops **future** dispatches; removing a property only unlinks its tenants going forward.

Who pays QuickieFix? During the founding pilot, the portal is free for agencies. Work itself is billed under your commercial agreement with your panel — agency → tradie for individuals, agency → company → tradie for company members.
